

Secure Collaboration Using Microsoft Teams – Deployment

SYNERGY
ADVISORS

Understand the different challenges that you face to protect your data

We help you design a solution to secure your Microsoft Teams implementation in this 400-level deployment dedicated to help you understand your current Teams security configuration and how best to improve it. We examine your specific Teams platform, perform knowledge transfer, outline use cases, and deliver a proposed solution to solve your business problems. Our best-in-class consultants help you understand how to deploy additional security features directly in Teams and how to integrate with additional Microsoft services.

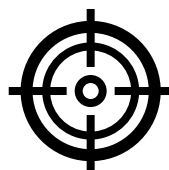

Deployment Overview Deployment Scope Deliverables

Implement key customer use cases around M365 focused on Microsoft Teams privacy, compliance, security concerns:

- Application Conditional Access

- Work Better Together

- **Who** Should Attend?
 - BDMs
 - TDMs
 - IT Pros
- **Length**
 - Time and Materials
- **Use Cases**
- **Location**
 - On-Site
 - Remote

- Knowledge transfer and customer use cases.
- Solution implementation in Staging and Production
- Includes up to 3 months of E-Visor for M365
- Document deliverables

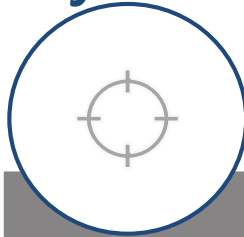

Key Solutions Components

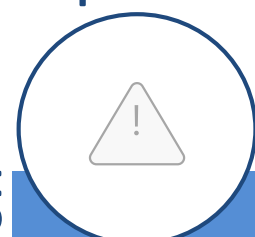

Threat Protection on Teams

- Secure your conversations.
- Protect your documents in teams.
- Eliminate usage of unauthorized apps.
- Restrict the flow of sensitive information outside the organization.
- Protection against phishing.
- Analysis and protection of content and threats in files uploaded by guests and internal users.
- Leverage Microsoft's robust malware detection.

Data Protection on Teams

- Teamwork and collaboration tools with built-in security.
- Meet compliance requirements.
- Streamline governance by defining naming convention and expiration policies.
- Automate data retention policies.
- Classify data according to organizational taxonomy.
- Robust data center controls and encryption.
- Certified compliance of datacenters.
- Policies and rules that prevent information leakage.
- Automatic inspection always.

Data Exfiltration Protection

- Security features are natively integrated with Teams
- Easily share files with co-workers, outside contractors and suppliers securely.
- Avoid the download and use of information by unauthorized persons.
- Avoid copying/pasting sensitive information or forwarding unauthorized information by email.

Agenda

Knowledge transfer and use cases review

Teams productivity and hardening configuration + Other M365 Security components
