Technology

Efficient and tested tools

=

Best of two worlds

Fast, cost-effective findings and recommendations

Managing end-to-end identity and access is a must today, across both partners and internal employees.

One of the most critical vector attacks and potential risks comes from access granted to vendors and other external users via Business to Business (B2B) scenarios.

We can help you enable an agile way to manage access to different business applications and resources in your organization.

End user

Improved user experience for self service access request

Approver

Efficient and timely way to provide access to users

Revoke access

Flow to ensure that permits are kept up to date

The process

Review and install

An expert will analyze your current identity governance configuration, activity, and strategy.

Manage Access

E-Visor Teams App, in conjunction with AADP, makes it easy for users to request and managers to approve and revoke packages, with proper context and information inside Microsoft Teams

Findings and action plan

We review the analyzed results, along with a prescriptive action plan with you in two efficient, one-hour meetings, giving you high ROI at low cost.

Important: all EDO offerings run in your Azure tenant subscription, so the collected data is yours!
