

Enhancing Identity & Access Management

Featuring My Resources

In today's evolving workplace, collaboration and flexible access to resources is more important and more challenging than ever before. Organizations are seeking better ways to help both remote and on-premise staff do more while controlling access based on risks and intelligence.

Synergy Advisors, a leading Microsoft Gold Partner and developer of the E-Visor for Teams App, has now incorporated a new "My Resources" feature into the application, focusing on identity and access management. App packages help organizations provide Access Management to users based on profiles or roles. E-Visor helps users easily request, track, and approve app packages directly from a single location with Microsoft Teams where they can also review other critical productivity and security information.

An access package enables you to do a one-time setup of resources and policies that automatically administers access for the life of the access package.

My Resources solutions:

- Makes it easy for the *right* people to have the *right* access to the *right* resources.
- Makes it easy for users to request and managers to approve packages, with proper context and information.
- Makes it easy to remove access to resources when users no longer require them.

How My Resources + E-Visor Teams App work together

Simple two-step process:

1 Download the E-Visor for Teams App from the Teams App Marketplace

2 In the My Resources section, users will see:

Access packages – User request package based on profiles

My request status – See and remove active packages

Resource details – See resource access details

Package approvals – Who, type, state, due date

Microsoft 365 Teams Group | SharePoint Online Site | Security Group | Application

My App Packages + Teams work together

Better Together: Teams + E-Visor for Teams App

Consolidated view of end-user packages:

- Available packages [perpetual or time-bound]
- Active packages and option to remove
- Expired packages
- Resource details

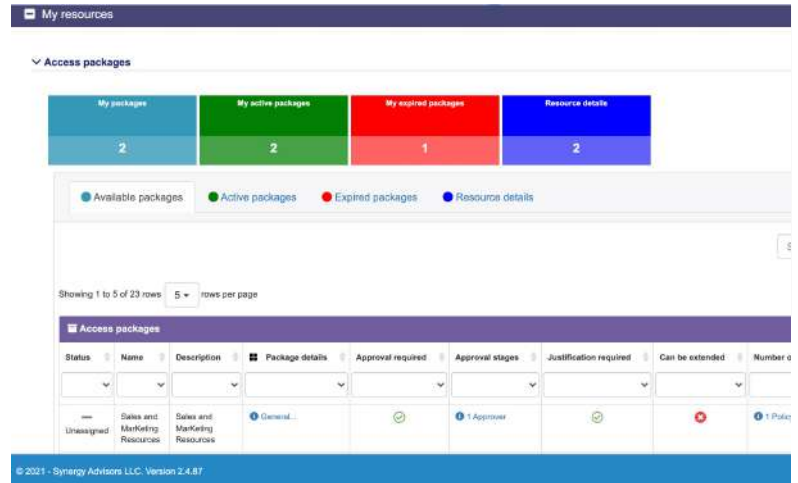

Single application natively integrated with Microsoft Teams

Centralized console for access package actions

Easy deployment & package request with just one click

Why the E-Visor Teams App

Microsoft Teams is the single workspace that connects all team members and tools required to be productive, no matter where they are or what they do. The **E-Visor for Teams App** is a collaboration and analytics Teams-native app, tested by Top 100 financial organizations, designed to improve security and productivity at the end-user level.

With the **My App Packages**, users get real-time access to corporate packages, a record of all requests and corresponding status and approval options.

Who is our Target Audience?

- Any organization looking to:

- Reduce administrative tasks
- Reduce administrative costs
- Consolidate administrative views
- Simplify process automation
- Track activity
- Securely provision packages

Benefits of the E-Visor Teams App and My Resources

Saves time and money by having a single location to submit, track, and approve requests

Single pane of glass to track all package activity
