

Identity Governance

Intelligently govern identities and prevent security gaps

Identity security remains a challenge

Most common identity-related attacks

Phishing attacks

Inadequately managed privileges

Stolen credentials

Brute force attacks: Password spraying or credential stuffing

Problems organizations face

User Lifecycle Challenges

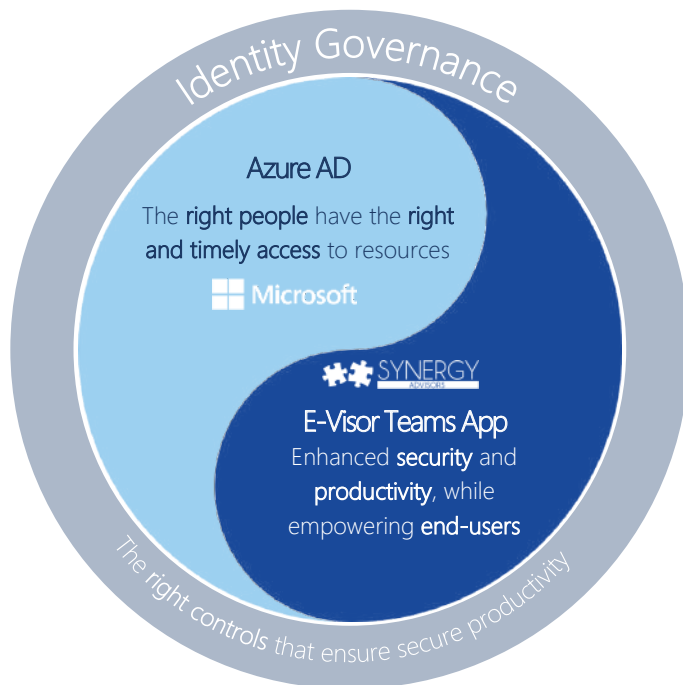

- Users get initial access to systems
- Users do not know what access they should have
- Sometimes users hold on to access longer than required
- These problems are compounded for external users

Core issues

- Inefficient and manual processes
- Non-automated processes when workers take on new roles or exit the company
- It can take days (or even weeks) to onboard new hires
- Disgruntled users can steal user privileges to launch attacks
