

Micro-Visor

Compliance

Compliance and data protection are now top priorities for organizations. The **uncontrolled exchange of unstructured data**, especially with third parties, often occurs **without visibility** into who accesses the data, how it is used, or under **what permissions**. This creates **data exposure**, increases **regulatory and security risks**, and can severely impact **operational integrity and brand reputation**. With the rise of AI, it is essential to mitigate both human and automated access risks and ensure robust, compliant data governance.

...of organizations have **sensitive data** in the cloud exposed without **access controls**, allowing unauthorized users or AI tools to view or manipulate it.

...of user or service accounts have privileges to **freely export sensitive information**, without any restrictions or oversight.

...of organizations have **sensitive data directly exposed to AI tools**, drastically expanding the attack surface and the likelihood of a data breach.

...of organizations have experienced security incidents related to **access by external users** such as customers, partners, or temporary collaborators.

Empowering Organizations with Control and Compliance

Micro-Visor (Compliance) empowers both end users and administrators with a centralized and intelligent view of file exposure and access across Microsoft 365 — natively embedded in Microsoft Teams, right where daily activity occurs.

Designed for compliance, security, IT, and risk teams, it correlates user behavior and file access with risk indicators and sensitive data, giving complete oversight across data-at-rest repositories. Micro-Visor delivers real-time guidance to reduce compliance violations and data misuse — all without disrupting productivity or team workflows.

Effectively managing data exposure requires more than access permissions — it demands real-time risk visibility, clear user guidance, and reduced compliance-related operational effort:

Alerts and Notifications

Notify users directly in Microsoft Teams when potential data exposure risks are detected — considering file sensitivity, access type, and configurations that may introduce compliance vulnerabilities — without relying on email.

User Education

Help users understand data misuse and compliance risks through a visual interface showing access logs and risk levels, with color-coded indicators based on file type, encryption, content sensitivity, and unauthorized access attempts.

Self-Service

Enable users to independently correct non-compliant settings from within Teams, guided by data protection policies — enabling immediate action without external intervention.

Reduced Operational Costs

By providing a clear view of risk and enabling user action, the organization enhances its incident response capabilities, reduces time spent on compliance management, and minimizes unnecessary exposure of sensitive information.

Oversharing of information is not a new issue — but the expansion of digital operations and Gen-AI tools has drastically increased its scale and implications. While many organizations focus primarily on technical threats, they often overlook the underlying structural and human factors at the core of the problem. To effectively address data exposure and compliance risk, let’s examine the three key drivers that sustain and amplify this challenge:

Synergy Advisors Oversharing Risk Framework: An end-to-end approach based on decades of expertise in data protection and compliance

At Synergy Advisors, we apply a structured risk classification model to analyze file exposure across Microsoft 365 environments. This methodology enables us to identify and address critical scenarios that threaten data protection and regulatory compliance — providing a clear path to reduce oversharing and minimize risk.

Risk Scale	Color	Sensitive Information	Protection (Label + Encryption)	High Exposure	Description
3 – High	Red	Yes	No	Yes	The file contains unprotected sensitive information and/or is widely shared.
2 – Medium	Orange	No	No	Yes	The file does not contain sensitive information, but it is widely shared.
1 – Low	Yellow	No	No	No (limited)	The file does not contain sensitive information and is shared with few users.
0 – Minimum	Green	Yes / No	Yes / No	Anyone	The file does not contain sensitive data or is properly protected.

Micro-Visor: Driving Visibility and Control for Regulatory Compliance

Personalized Risk Detection and Compliance Control

User-centered visibility with key insights: A personalized approach, displaying only the files related to the user's activities. Micro-Visor shows critical information for each file, such as **risk level**, **detected sensitive data**, **protection status**, **excessive sharing**, and **access by others**, enabling quick response and effective corrective actions.

Intelligent filters for focused analysis: Dynamic filtering by **risk levels**, **sensitivity labels**, **protection status**, and more, enabling fast, precise exploration, optimizing user time and prioritizing critical compliance cases.

Administrative Visibility of User Collections for Proactive Actions

Administrative view: "My Organization" view provides administrators with centralized oversight of user collections. Advanced filters enable the visualization of each user's risk and compliance status, facilitating comprehensive security management.

Visibility for proactive action: Detailed information about users and their files, enabling administrators to make informed decisions and take proactive actions to enhance security and compliance across the organization.

Optimize, Protect, and Scale: The Real Value of Micro-Visor (Compliance)

Micro-Visor (Compliance) is more than a monitoring tool — it is a strategic compliance solution that transforms how organizations manage data exposure and regulatory risk. Regardless of your stage of AI adoption, Micro-Visor delivers peace of mind through actionable visibility and built-in data protection controls.

By offering clear insight into file-level risk and empowering users to take informed, policy-aligned actions, Micro-Visor helps reduce regulatory exposure, reinforce information protection, and embed a culture of compliance across the organization. With Micro-Visor, **data protection becomes proactive, measurable, and scalable.**

Why choose Synergy Advisors as your strategic partner?

At **Synergy Advisors**, we deliver specialized consulting and managed services to help your organization strengthen data protection and regulatory compliance. Our **Micro-Visor (Compliance)** solution provides centralized oversight, actionable intelligence, and automation to reduce the risk of data overexposure and ensure alignment with internal and external policies.

We go beyond the technical layer by working closely with your teams to enable policy adoption, streamline compliance efforts, and reinforce responsible data usage at every level of the organization. With Micro-Visor, your organization gains the clarity and control needed to safeguard sensitive information—and respond confidently to compliance demands.

Consulting Services

Over 14 years of experience working with hundreds of clients and thousands of users in market-leading organizations across various verticals, specializing in Security and Compliance, Modern Work, Azure Data and AI, and Azure Infrastructure.

- Designing and implementing Microsoft solutions.
- Focused on usability and protection to drive upsell and adoption in key use cases.
- Integrated approach, creating synergies among Microsoft products.

Managed Services

Experts in cybersecurity, infrastructure, and Modern Work in Microsoft 365, Azure, and Windows 365.

- Proactive and reactive services.
- Continuous monitoring, optimization, and evaluation of new services and features.
- Collaboration with other vendors, providing a single point of contact.
- Support contracts available for escalation with native providers

E-Suite

E-Suite: Seamless integration with Microsoft 365 and Azure.

Amplifies the features and reach of Microsoft workloads to address modern business, governance, and operational needs by leveraging analytics, workflows, and self-service; empowered end users through

- Micro-Visor
- E-Visor
- E-Visor Teams App
- E-Inspector
- E-Cryptor
- E-Vigilant
- E-Migrator
