

AGENT GOVERNANCE

# Validate Agent 365 in a controlled production environment

## Tested scenarios and evidence to authorize agent usage with A365

You know which Agent 365 capabilities matter to you, but you haven't yet confirmed how your agents behave under governance: predefined scenarios must be validated in a controlled environment.

To expand adoption you need confirmed evidence across the full cycle — discovery, governance, security, identity and data protection — with your own agents and your change management process.

Across the market, the size of that gap can already be measured:

### Validate functionality and an agentic risk baseline before scaling.

That is what our E-evaluation experience delivers: a predefined set of scenarios validated against your own requirements.

## E-evaluation: validate Agent 365 before scaling adoption

E-evaluation validates Agent 365 in a controlled production environment through predefined scenarios, configured and tested against your requirements. The engagement confirms functionality and establishes a baseline for managing agentic risk before broader adoption.

The validation covers the full cycle — discovery, governance, security, identity and data protection — and documents findings, adjustments and priorities. It is aimed at security, IT and workload leaders at Level 300 (TDM), delivered remotely or hybrid.

- 

A controlled scope to reduce uncertainty, anticipate impacts and validate behavior before scaling.
- 

Expert judgment to define configuration, governance controls and best practices for your operating context.
- 

Predefined scenarios, tailored to your requirements and validated with evidence of function and control.
- 

Documented results, a prioritized plan and an executive roadmap to define scaling conditions.

## Agent 365 (A365) — Production pilot use cases

| BASE                                                                                                                              |                                                                                                                       | BETTER TOGETHER                                                                                        | THIRD-PARTY AGENTS                                                                            |

## How the sessions work

## Experience portfolio: a governance journey

## Decide on the move to production with risk assessed

You move to production knowing exactly how your agents behave, where the risk is and what you need to govern them at scale.

Less uncertainty and fewer surprises; investment focused where it reduces risk most.

Let's take the next step together.
